HWT Q1

4/10/17

- All prototypes stated in abstract classes are virtual
- $\blacklozenge \rightarrow$  is the symbol for the has-a/composition relationship, standard arrows simply show inheritance.
- Although Color is denoted as its own class, that is TBD - in implementation the use of ANSI escape codes or BMP may be more efficient
- Character class will always "have" objects - Item and Transportation are not characters, and do not hold the same functions as other classes
